## Product Overview:

Powered by Alien ${ }^{\circledR \text { ' }}$ s break-through Higgs ${ }^{\text {TM }} 3$ UHF RFID IC and innovative Short antenna design, the ALN-9662 delivers industry leading EPC Gen 2 performance and reliability in a narrower width than it's bigger brother, the Squiggle ${ }^{\circledR}$.
ALN-9662 inlays are World Tag compliant, enabling consistent operation across the diverse frequencies of the Americas, Europe, Middle East, Asia, and Africa.
With its Higgs-3 core, the Short delivers excellent performance and a rich feature set including a 32-bit TID, a 64-bit Unique TID for authentication and serialization applications, an extensible EPC memory bank, 512-bits of user memory for distributed data applications, and password protected read and write support capabilities to prevent unauthorized viewing and modification of the tag's data.
Typical applications for the Short include, but are not limited to, corrugate cases, pallet placard labels, apparel hang tags, shipping labels, asset management, file folder labels, and application on plastics.
