AdvanSplitter-4 ™ RFID UHF power splitter

AdvanSplitter-4™

RFID UHF power splitter

Benefits:

- · Higher speed to scan an area
- Combines different Keonn antennas, creating new antennas with longer read range and narrower beamwidth
- Very fast and easy connection
- Very low insertion loss
- Capable of supporting unbalanced loads

Applications:

- · Smart shelves
- Any RFID application that requires high speed scan
- Any RFID application that requires long read ranges
- Any RFID application that requires narrow beamwidths

Product overview

AdvanSplitter-4 is a high performance four port power splitter designed for RFID UHF applications.

AdvanSplitter-4 is ideal for systems where reading speed is critical and tag location is not determinant. AdvanSplitter-4 can feed up to 4 antennas simultaneously in order to scan an area much faster than using multiplexers.

AdvanSplitter-4 can also combine different Keonn antennas in new ways, creating new antennas with longer read range and narrower beamwidth.

AdvanSplitter-4 can therefore be used to create new antennas adapted to the needs of each RFID application. This flexibility allows to find the optimal antenna solution for any RFID project.

AdvanSplitter-4 has very low insertion loss, typically 0.7 dB above the 6 dB split.

AdvanSplitter-4 has been designed to keep its performance even when one or some ports are not connected to any antenna.
