

SIVA RFID Race Timing Bibs with 2 UHF Foam Transponders

SIVA's Tyvek number bibs are supplied with crisp 4c & variable data printing. The Bibs are Tear-proof, waterproof, stretch resistant, flexible & durable & have punched out holes on all 4 corners for easy application onto the participant.

Two UHF passive foam transponders attached to the back of the number bib are robust, light weight and have excellent read range that allow accurate recording of runner's time. The transponders are printed & encoded and duly applied on the reverse side of the bib, so that the bibs are ready for use, straight out of the box (no assembly required).

This whole offering is designed for one-time use only and can be disposed of after the event or taken home by participants as a souvenir.

TAG SPECIFICATIONS	FOAM TAG	
Product	SIVA Dumbel™	Smartrac DogBone®
Inlay Dimensions	99 x 34.29 x 3.0 mm	99 x 31.75 x 3.0 mm
