Chemical resistance

No physical or performance changes in:

- 2 hour Motor oil exposure

- 2 hour Salt water (salinity 10%) exposure

Additionally, short time exposure resistance against sulfuric acid. Acetone and sodium hydroxide should be avoided.

Expected lifetime

Years in normal operating conditions

Values in the table are the best recommendations; resistance against environmental conditions depends on the combination of all influencing factors, exposure duration and chemical concentrations. Thus, product's final suitability for certain environmental conditions is recommended to be tested. Contact Confidex for more specific information.

PERSONALIZATION OPTIONS

- Customer specific encoding of EPC or user memory. Locking permanently or with password.

Customized data label

- Customer specific layout including logo, text, numbers, barcodes etc.

INSTALLATION INSTRUCTIONS

Confidex Steelwave Micro™ is designed to be attached with high performance 3M acrylic adhesive that is delivered by default on the tag background.

When mounting the tag with its adhesive background, clean and dry the surface for obtaining the maximum bond strength. Ideal application temperature is from +21°C to +38°C (+70°F to +100°F), bond strength can be improved with firm application pressure and moderate heating from +38°C to +54°C (+100°F to +130°F). Installation at temperatures below 10°C (50°F) is not recommended.

For optimal performance leave metal to the right side of tag

To achieve the optimal performance please locate the tag on metal like shown above. Ideally the tag is placed on large even metal surface with direct metal contact underneath the whole tag.
